FORMWORK & SHUTTERING

Forms that hold their shape, so the concrete comes out straight.

We build formwork for columns, walls, beams, slabs and stairs, using timber and plywood, steel wall panels and props. Forms are set to line and level, braced to take the pour and sealed so the concrete comes out straight and clean, then struck safely when it is ready.

Column forms across the basement
Forms braced and plumbed at every grid line.

WHAT WE COVER

- Column forms in timber and plywood
- Basement and retaining wall panels
- Beam sides and slab decks on props
- Stairs, ramps, edges and upstands
- Box-outs for openings and sleeves
- Striking, cleaning and re-use

HOW WE WORK

01 Set out
Lines, levels and grid lines marked from the drawings.

02 Build & brace
Forms erected, plumbed and braced to take the pour.

03 Seal & check
Joints sealed, release agent on, sizes checked.

04 Strike
Struck when the concrete is ready, cleaned for re-use.

Column forms going up
Braced timber forms along the basement walls.

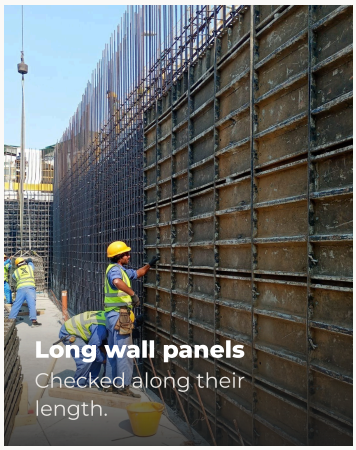

Wall openings
Fixing a timber box-out for an opening.

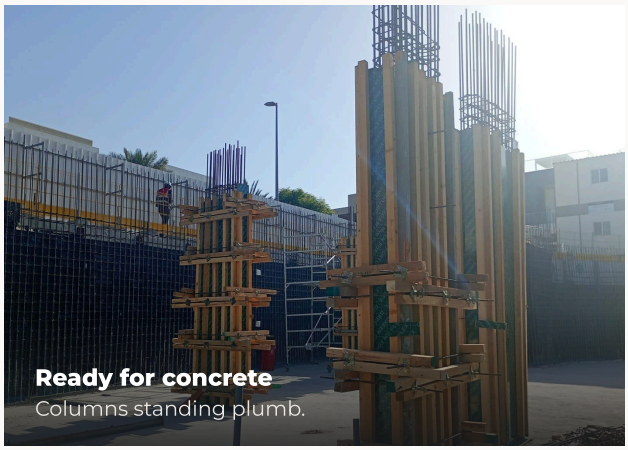

Braced column forms
Clamped and propped on all sides.

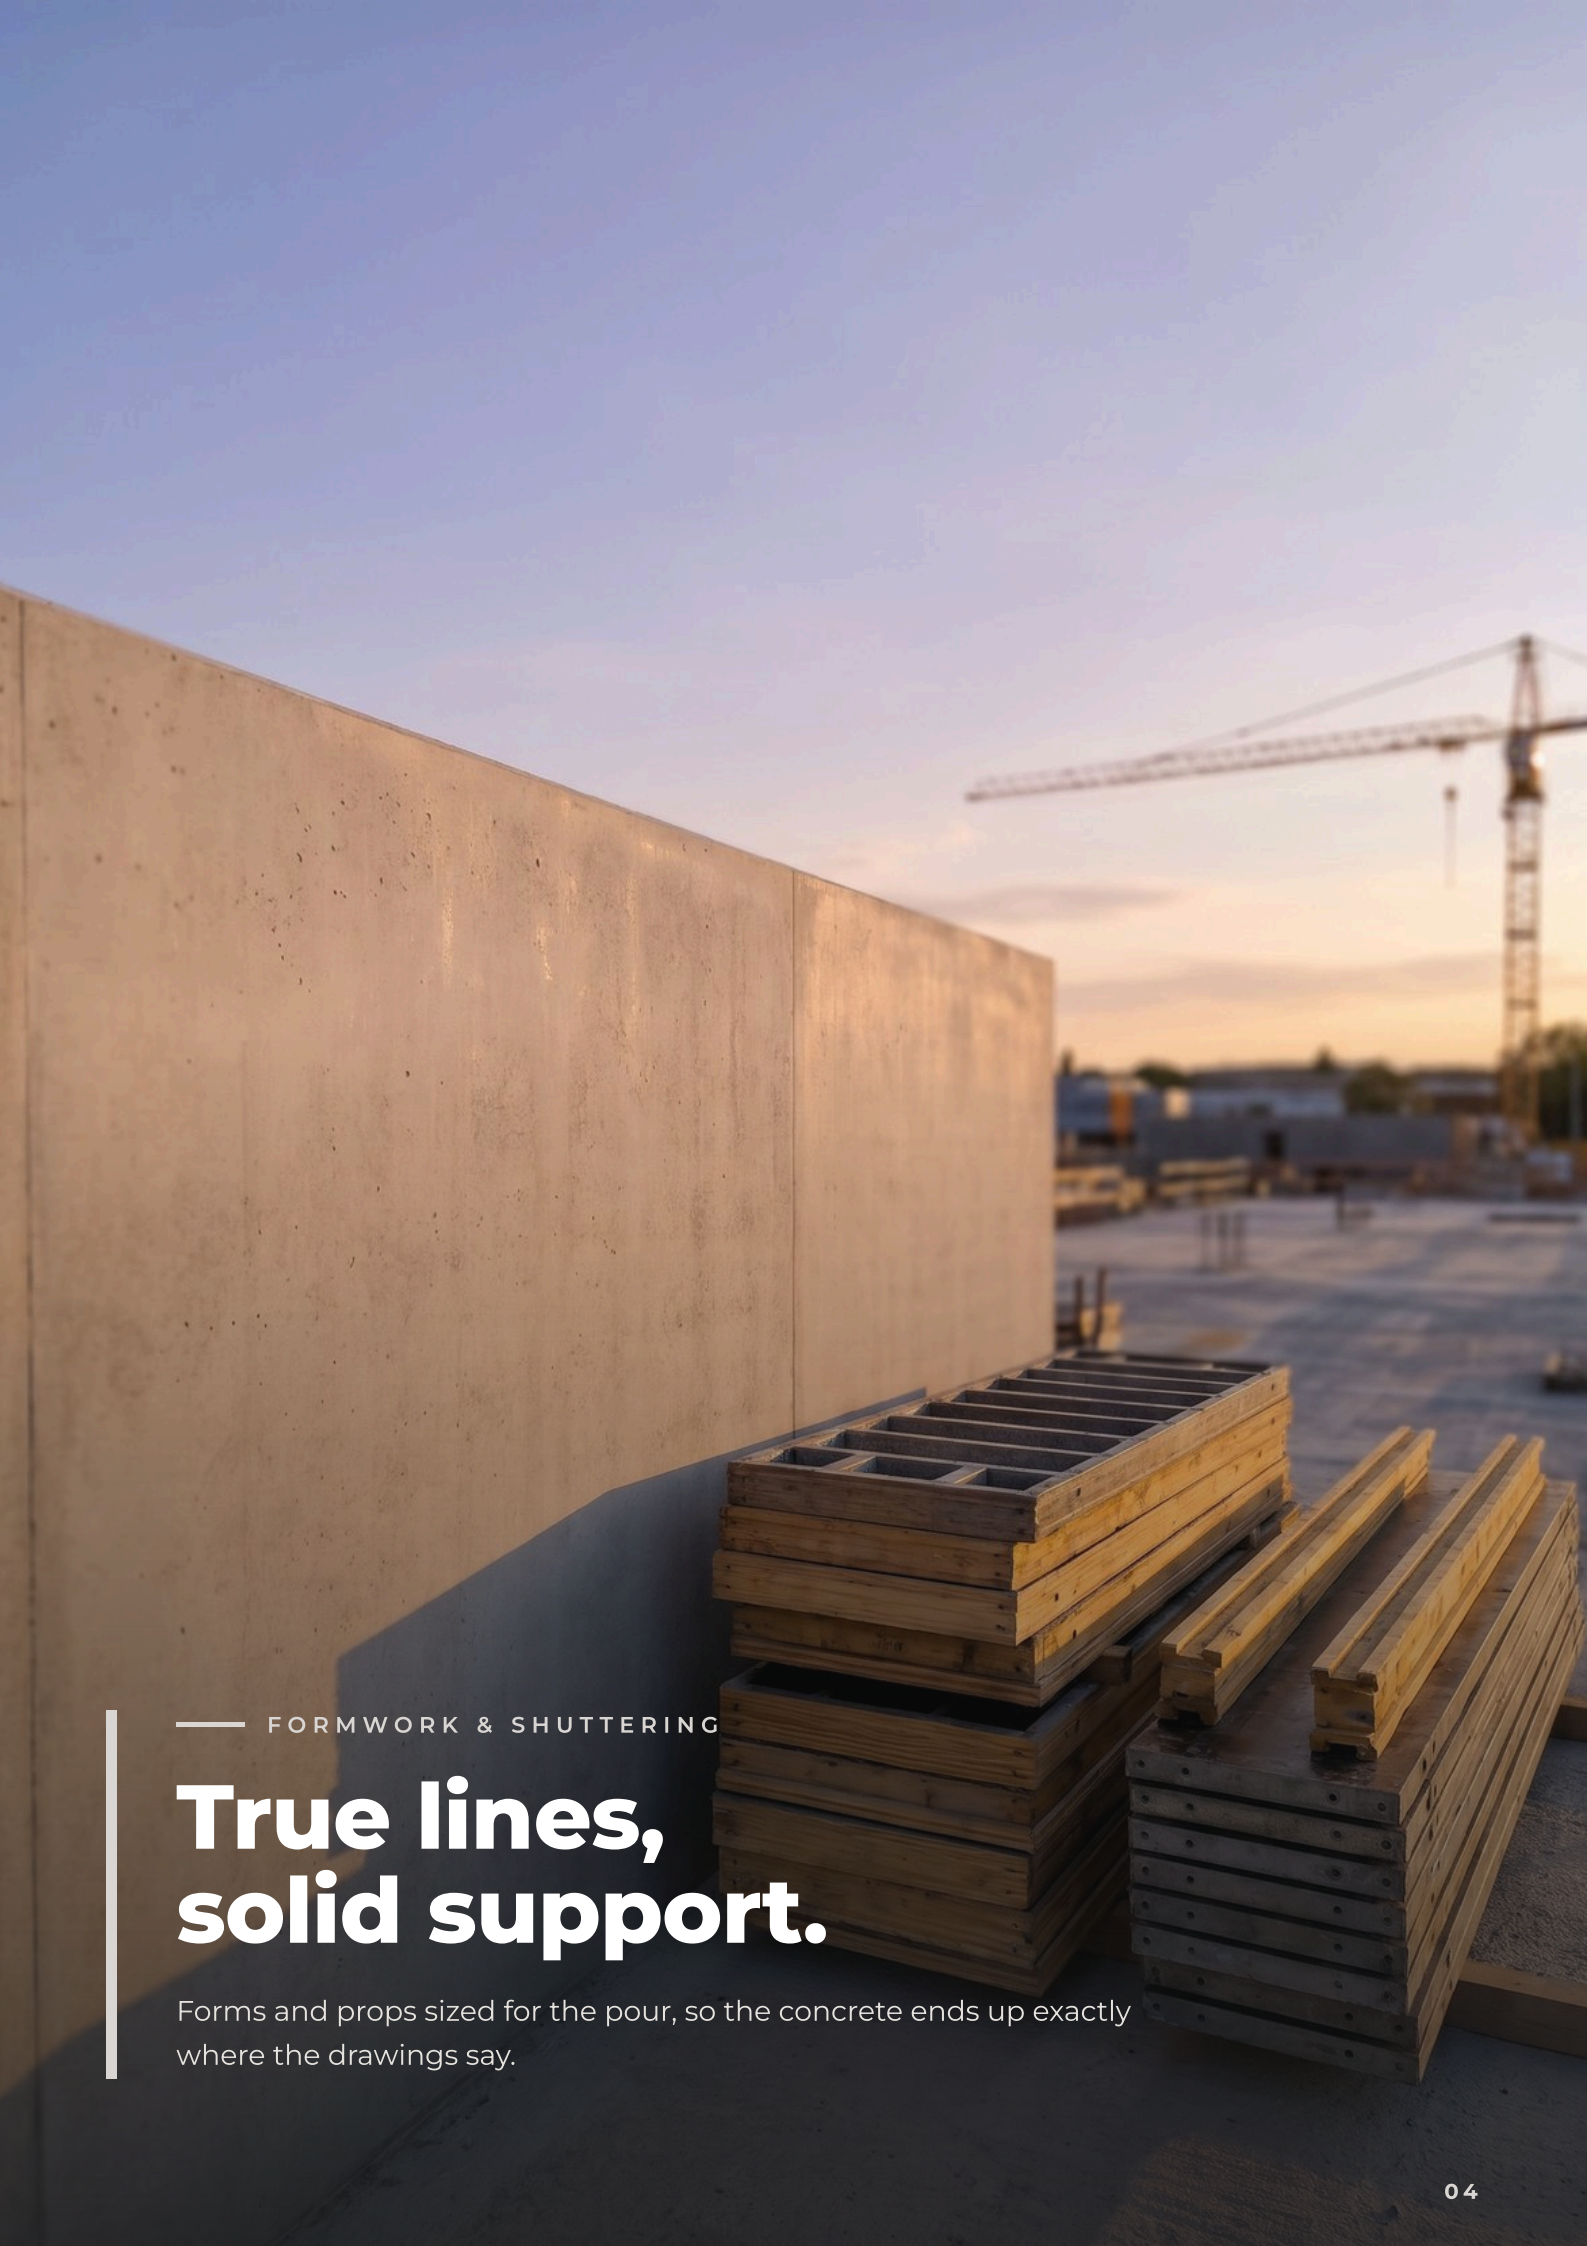

Wall formwork
Steel panels set to line.

Long wall panels
Checked along their length.

Ready for concrete
Columns standing plumb.

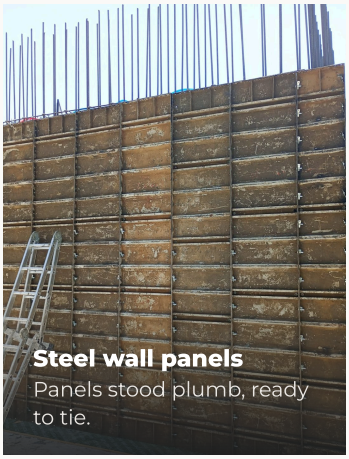

FORMWORK & SHUTTERING

True lines, solid support.

Forms and props sized for the pour, so the concrete ends up exactly where the drawings say.

Slab deck from below
Plywood deck on beams and adjustable props.

Steel wall panels
Panels stood plumb, ready to tie.

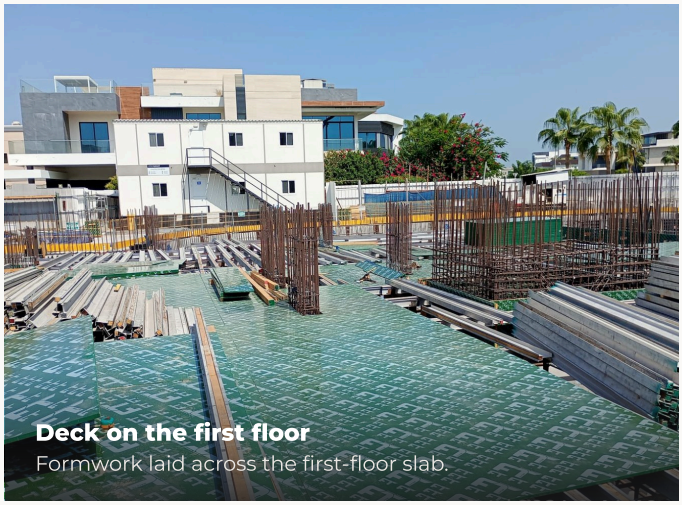

Slab support
Props and ledgers set out under the slab.

Props in line
Props set out evenly under the slab.

Slab deck
Plywood deck laid, ready for the steel fixers.

Deck on the first floor
Formwork laid across the first-floor slab.

IN DETAIL

Decks built on a grid

Slab decks sit on a regular grid of props, checked for level and braced before any steel goes on.

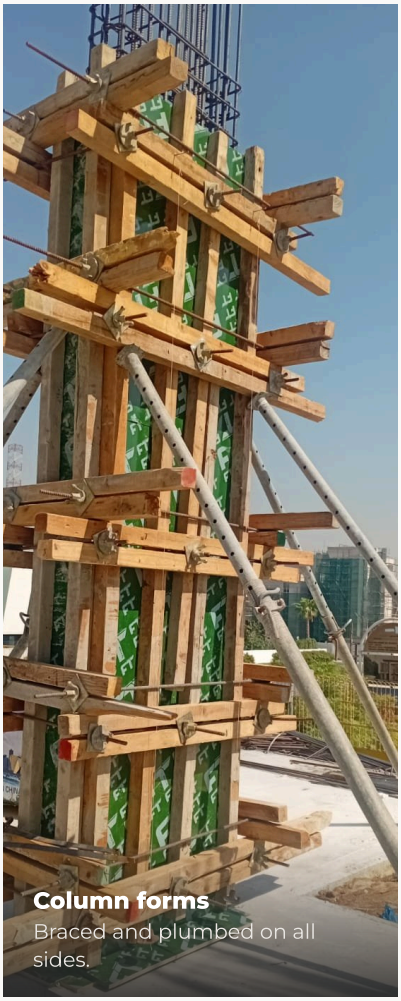

Wall formwork
Steel panels tied and aligned along the wall.

Roof slab support
Beams and props set out under the roof slab.

Beams on props
Primary beams levelled across the columns.

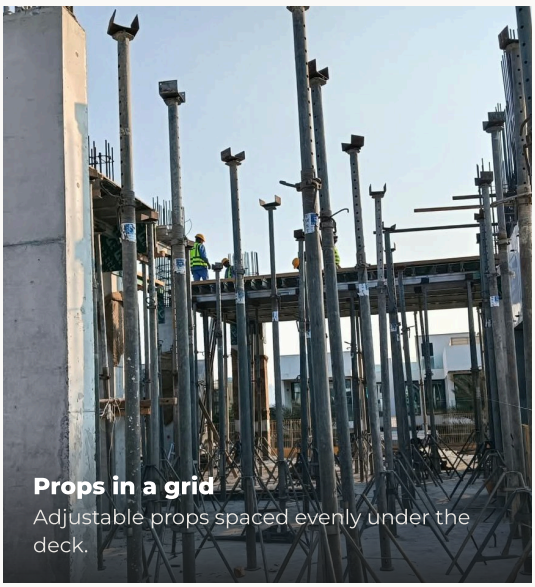

Column forms
Braced and plumbed on all sides.

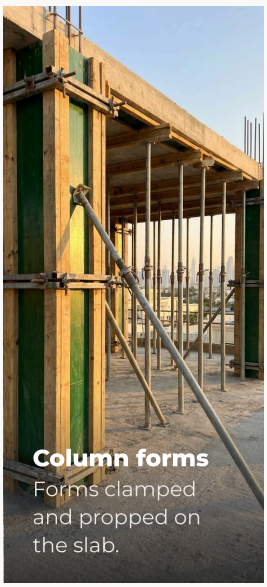

Column forms
Braced and plumbed on all sides.

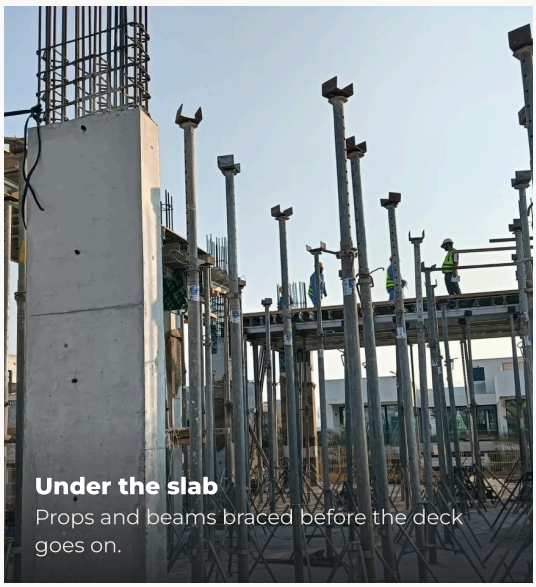

Column forms
Braced and plumbed on all sides.

Props in a grid
Adjustable props spaced evenly under the deck.

Column forms
Forms clamped and propped on the slab.

Under the slab
Props and beams braced before the deck goes on.

Roof level
Deck edge formed around the roof slab.

Column forms
Braced and plumbed on all sides.

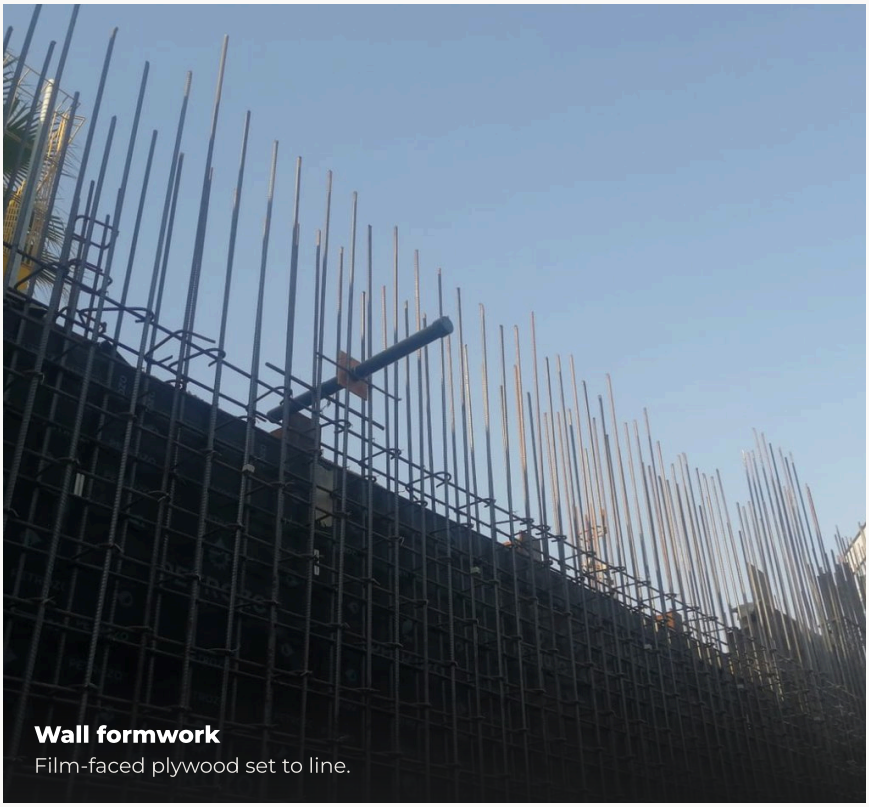

Column forms
Braced and plumbed on all sides.

Column formwork
Clamps at even spacing up the form.

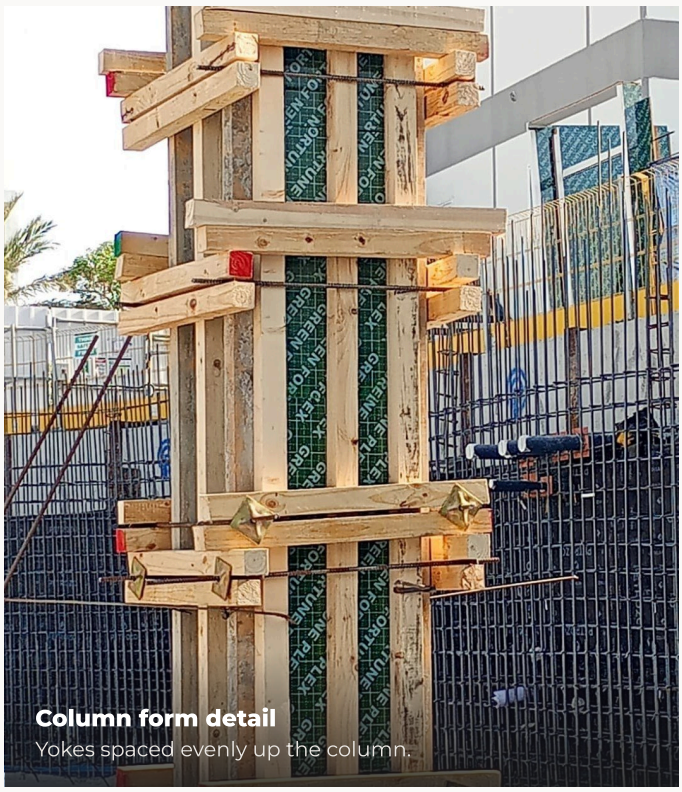

Wall forms
Long panels clamped and propped in line.

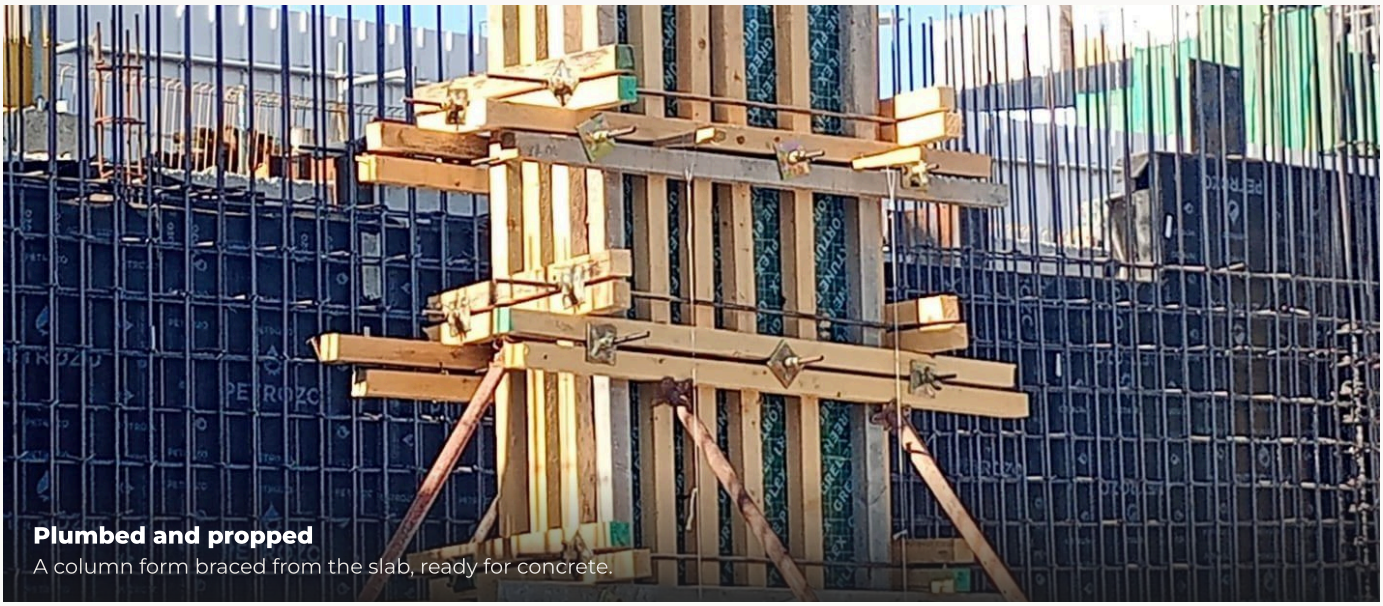

Wall formwork
Film-faced plywood set to line.

Opening frame
Trimmed before the forms close.

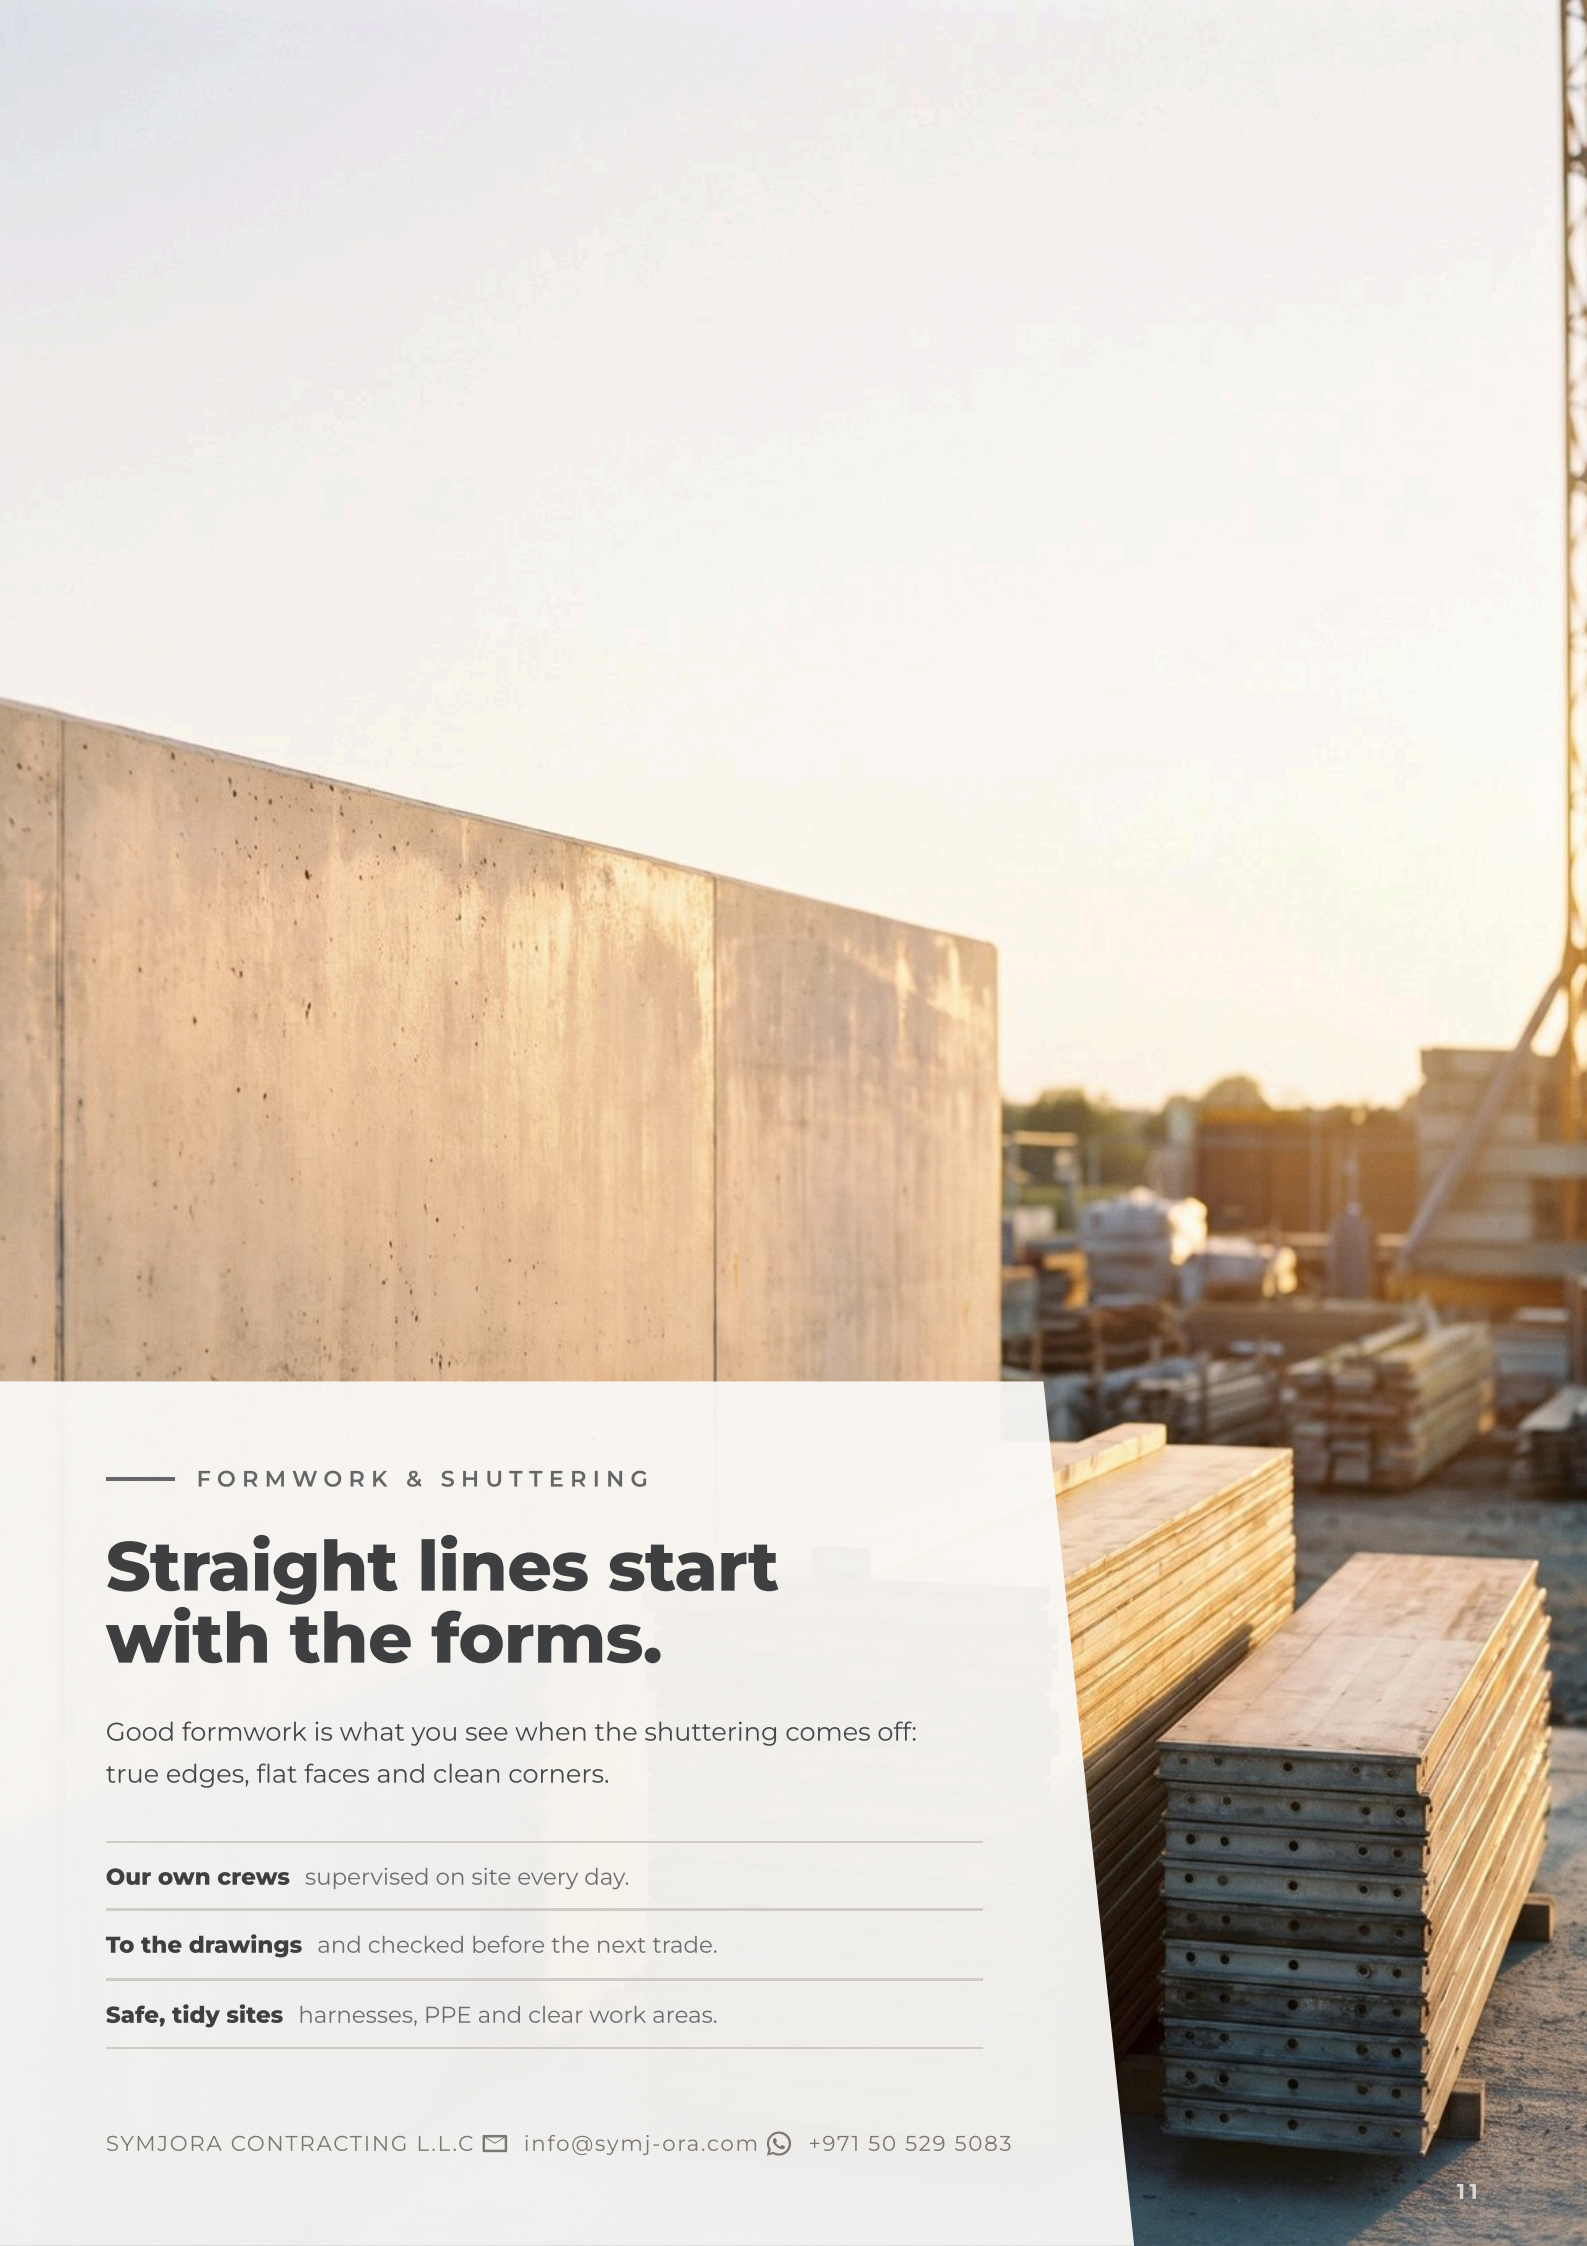

Column form detail
Yokes spaced evenly up the column.

Plumbed and propped
A column form braced from the slab, ready for concrete.

WHAT WE CHECK BEFORE THE CONCRETE

- ✓ Plumb, line and level
- ✓ Bracing and props sized for the pour
- ✓ Tight joints, no grout leaks
- ✓ Column, wall and beam sizes
- ✓ Clean forms with release agent
- ✓ Box-outs and sleeves fixed

FORMWORK & SHUTTERING

Straight lines start with the forms.

Good formwork is what you see when the shuttering comes off: true edges, flat faces and clean corners.

Our own crews supervised on site every day.

To the drawings and checked before the next trade.

Safe, tidy sites harnesses, PPE and clear work areas.
